

Software Tester (Junior/Middle) – with Luxembourg-based FinTech

The Company

We are the Financial Navigator, a Luxembourg-based FinTech dedicated to transforming how mid-sized and large SMEs manage their finances. Our solution, the Financial Navigator, empowers treasury and finance teams to operate more efficiently, exceed expectations, and drive greater value for their companies.

As financial management becomes increasingly complex and demanding, we've developed an innovative software solution that centralizes all decision-relevant information into a single platform—simplifying processes and enhancing control. We help our clients to transform their Finance Department.

Founded by a team of seasoned entrepreneurs who successfully built and exited their first venture (PayCash, acquired by Daimler), we bring deep expertise in financial innovation. At our core, we stand for innovation, respect, honesty, and creativity—principles that drive everything we do. To realize our vision, we seek creative, dedicated individuals who share our values to join Financial Navigator.

Technology stack

Microservice architecture, Java 17+, MariaDB, MongoDB, Gradle, AWS, Kotlin, Cucumber.

Your responsibilities

As a Software Tester with A352, you will work directly with our founders and our Head of Product on a variety of tasks:

- Analyse business and technical requirements to define test strategies.
- Perform manual and automated functional testing of core fintech features (e.g., payments, transactions, fraud detection, banking services).
- Design, develop, and maintain automated test scripts using the Cucumber framework with Junit and Kotlin/Java.
- Test RESTful and GraphQL APIs using tools like Postman, Swagger, or RestAssured.
- Validate integrations with third-party financial services (e.g., payment gateways, banking APIs, ERP-Systems).

Your profile

- Experience: 1-3 years of hands-on experience in software testing, ideally with a focus on fintech, banking, or payment systems.
- Education: Bachelor's or master's degree in computer science, Software Engineering, Information Technology, or equivalent experience.
- Experience working with SQL/NoSQL databases (e.g., PostgreSQL, MariaDB, MongoDB).
- Strong debugging and problem-solving skills.
- Ability to write clear and maintainable test automation code.
- You have strong verbal and written English communication skills; German / French a plus.

Our offer to you

- Work directly with startup veterans and be part of a fintech in its earliest stages.
- A great mission: we are set to service medium-sized businesses - the backbone of European economies and engine of growth.

Your availability

- You are available for a full-time position either in Luxembourg or hybrid.
- We are looking to fill the position year-round, with first availability starting in April to July.
